Providing Precision Machined Components
Since 1967

“Providing Precision Machined Components Since 1967”

1967

Krenz Krist Machine is a third generation family run business. Since 1967 we have grown from a tiny two man operation to a full service job shop that can handle all your precision machining needs. From prototype to high volume production we have the right equipment for the job. When you call Krenz Krist Machine the person at the other end of the phone will have a personal vested interest in your total satisfaction. We know that to keep you coming back we must deliver **QUALITY** parts, **ON-TIME** and at **COMPETITIVE** prices.

Rotary Transfer Machine designed to produce complex parts in high volume.

Krenz Krist services it's customers with 24 Multi-Spindle Screw Machines at our Cleveland facility. Shown is a partial view of our Multi-Spindle Screw Machines in Building A.

We have a complete in-house machine rebuilding program. This insures that we are always producing the highest quality parts for our customers.

QUALITY commitment

Quality is the essential element in measuring our performance. For this reason at Krenz Krist Machine our goal is to consistently provide a quality product that will meet or exceed our customers expectation. This is achieved by having a quality system in place that leaves no room for error. From part review meetings, first piece samples, quality documentation, final inspection and part certification we will do what it takes to keep you coming back.

COMPETITIVE pricing

To be price competitive you need the right machine for the job. At Krenz Krist Machine we have it covered. For simple low volume parts we have 2 axis CNC. For complex low to medium volume parts we have 5 axis CNC with live tooling. For medium to high volume parts we have single and multi-spindle screw machines with an assortment of attachments to drop parts complete. For very high volume parts we have rotary transfer. No matter what the volume we are a one-stop job shop that can handle it all.

ON-TIME delivery

At Krenz Krist Machine the key to on-time delivery is production and scheduling flexibility. Under one roof we have 24 multi-spindle screw machines, 13 single spindle screw machines, 5 CNC turning centers, 8 CNC milling centers and a host of support equipment. With this much equipment we have the ability to be flexible in the way work flows through our facility. It is this flexibility that keeps us shipping on-time.
